FiniiOne AI

DATA SECURITY & PRIVACY

Your business data is safe with us

Your invoices, inventory, GST and customer details are sensitive. Here is where we store them and how we protect them.

Where is my data stored?

Your data is stored on secure cloud servers managed by **Supabase**, which runs on **Amazon Web Services (AWS)**. AWS is used by banks, governments and large companies around the world. Your data is not stored on any personal computer or local device.

Encrypted end to end

Your data is encrypted while it travels (HTTPS/SSL) and while it is stored (AES-256, the same standard banks use).

Private to your account

Only you and the team members you add can see your business data. Other FiniiOne users can never access it.

Daily automatic backups

We back up your data automatically every day, so your records are safe even if something unexpected happens.

Never sold or shared

We never sell your data or share it with advertisers or third parties. We only use it to run your account.

Your data, your control

You can export your invoices and reports whenever you like. If you stop using FiniiOne, you can ask us to delete your data.

Secure login

Every login is verified, and each session is protected by a secure token. Please keep your password private and don't share it with anyone.

Built with Indian data protection law in mind

We handle your data in line with India's Digital Personal Data Protection (DPDP) Act, 2023: we collect only what we need, use it only for your account, and respect your right to access and delete it.
